

The Delaware Valley Green Building Council
Invites you to join us for a presentation on

LEED for Homes: Low Cost Pathways to Green, with Case Studies

Tuesday, January 19th, 2010, 5:30-8:00 pm

Are you interested in residential green building? Are you a LEED Accredited Professional working in residential construction? Do you want to understand more about the USGBC's rating system for Homes up to 6 stories? If you're in the industry and interested in LEED for Homes as a design tool and a quality management system, come hear the basics. The evening will cover the credit categories as well as the various phases of implementation from preliminary rating through final certification.

The evening will target design and construction professionals as well as government officials with an interest in green building. Time for questions will follow the presentation.

The course will be presented by Sam Klein, LEED AP, a local Quality Assurance Designee to the USGBC for MaGrann Associates. Sam has been involved with green building since 1998, including development of the Energy Star Qualified Homes program as a subcontractor of the EPA, and is currently an active member of the DVGBC Residential Circle.
